

# Software Solution - Cycle 3

- Due 11 Oct 2023 by 11:00
- Points 20
- Submitting a file upload
- Available until 20 Oct 2023 at 23:59

This assignment was locked 20 Oct 2023 at 23:59.

Oral demonstration of prototype beta for the GTLM web service. Presentation will occur during the registered tutorial session in Week 9 of the semester.

## Full Stack Web Experience

You will be required to demonstrate the final implementation of the GTLM system. This will include integration with backend database and suitable PHP scripting. This prototype beta should demonstrate a functional system supported by HTML, CSS, JavaScript, and PHP. Your web application should be successfully running on an AMPPS server and demonstrating real time interactions.

During your demonstration you will need to have one group member "driving" the interactions while other group members talk about features, implementations/changes from the previous phase, and the technologies utilised. You will also be expected to show your source code and clearly demonstrate good structure, formatting, naming conventions and code efficiency.

Before your oral presentation during your tutorial you will be required to submit a zip of your project to this assignment submission box.
